

The Challenge

If you are a healthcare professional, and the patients you care for require assistance with transferring in and out of bed, or to and from the bathroom, you know the challenges. **Next Health** offers the **AgileLife™ Transfer & Mobility System** ("TMS"), the only "**Zero Lift"** transfer and repositioning system that can result in better outcomes for immobile individuals, their families, caregivers and other providers.

Simply Solving Complex Needs for Healthcare Facilities

The AgileLife™ Transfer and Mobility System from Next Health integrates multiple components and technologies to create an innovative solution that virtually eliminates caregiver lifting, patient discomfort, risks of immobility related complications and "Never Events". The AgileLife™ TMS includes:

- A full powered hospital type bed, a wheelchair, a docking and transfer system that gently moves an individual to or from the bed to the wheelchair in approximately 2 minutes.
- An in-bed repositioning system that saves significant staff time and virtually eliminates pulling and tugging when moving an individual up in bed.
- A wheelchair that converts to a commode to reduce the need for challenging and time consuming bathroom transfers.
- ✓ A tilt-in-space wheelchair that minimizes spinal compression.
- Optional therapeutic mattresses, wheelchair seat cushions and supports to help prevent and heal pressure ulcers and provide required trunk support.
- An in-bed scale to provide regular weighing without transferring to a detached scale.
- 24/7 system usage data tracking.

AgileLife™ by the Numbers

Benefits

Patient:

- Can facilitate frequent movement which can help reduce risk of pressure ulcers
- Mitigates risk of fall during patient transfer
- Restores dignity

Healthcare Professional:

- Reduces risk of caregiver injury
- Safe, easy to use system
- Helps caregiver satisfaction
- Less time transferring and repositioning helps create more time for other tasks

Administrator:

- Reduces labor costs
- Can reduce direct and indirect costs of absenteeism, hiring and retraining
- Can assist in reducing Never Events
- Can help reduce loss time due to staff injury

Where We Have Been

The AgileLife TMS has been in a variety of settings:

- ✓ Hospitals
- ✓ Skilled Nursing Facilities
- ✓ Rehabilitation Facilities
- ✓ Assisted Living Facilities
- ✓ Private Homes
- √ Group Homes

Customer Support

Training:

- Designated Account Manager
- "Hands On" training for all shifts
- Quick reference cards
- User manual

Customer Support:

- Customer Support Line provided
- Remote system monitoring
- Designated Account Manager

Field Support:

- Proactive maintenance
- Service calls are typically made within 24hrs

Data Analytics:

- 24/7 Patient & System data tracking
- Performance metrics

Success Measured Over Time

System and client use was continually recorded over a twelve month period with the following results:

Client Testimonials

"(It) will cut down on labor costs, as well as time, which allows nurses to actually do more of what they need to do in direct patient care instead of transferring a patient in and out of bed." Hospital Administrator

"Instead of taking extra time to get a Hoyer to lift him out of bed – with the touch of a button you can easily move the patient. Before AgileLife it was a two-person transfer just to reposition the patient who has to be moved multiple times per night. There is less strain on my back because I don't have to physically move anyone anymore. We also don't have to pull or tug at the patient, which he appreciates because it adds to his independence and dignity. Overall, I would definitely recommend AgileLife to patients with immobility issues, as it takes a lot of strain and pressure off both the patient and user." *Clinical Nursing Assistant*

"The AgileLife has been a "game changer" for me. The mechanical lift caused extreme pain and the AgileLife is very comfortable. I felt a sense of freedom when this came and can't say enough about it." *Patient in Skilled Nursing Facility*

Next Health mom loves it! Now she can spend the better part of her day out of bed." Daughter of Client in Assisted Living Facility
